Greetings!

When using Firefox and other apps, certain fonts (such as 'Helvetica') look very rough on a fresh install of GhostBSD 19.04. This is also an issue on FreeBSD. I have attached two images. The first (default) pic shows how the meta and body text of a forum posting looks very rough. The second (with changes) picture shows the same text, now looking good and smooth.

I have used this configuration at ~/.config/fontconfig/fonts.conf to fix the problem:

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE fontconfig SYSTEM "fonts.dtd">
<fontconfig>
  <match target="font">
    <edit mode="assign" name="antialias"><bool>true</bool></edit>
    <edit mode="assign" name="rgba"><const>none</const></edit>
    <edit mode="assign" name="lcdfilter"><const>lcddefault</const></edit>
    <edit mode="assign" name="hinting"><bool>true</bool></edit>
    <edit mode="assign" name="hintstyle"><const>hintslight</const></edit>
  </match>
  <match target="pattern">
    <test qual="any" name="family"><string>sans-serif</string></test>
    <edit name="family" mode="assign"><string>Liberation Sans</string></edit>
  </match>
  <!-- Reject bitmap fonts -->
  <selectfont>
    <rejectfont>
      <pattern>
        <patelt name="scalable"><bool>false</bool></patelt>
      </pattern>
    </rejectfont>
  </selectfont>
  <dir>~/.fonts</dir>
</fontconfig>
```

Note the 'reject bitmap fonts' section. This is what fixes the rough look.

Can this fix be included in the skel files that are copied to new users?

Thanks! :-)

Default font look:
I am running GhostBSD 19.04 after installing last night. I am using the standard MATE desktop.

After a boot or reboot, when I log in I get a lot of error messages:

This computer has two other disks installed, one with Linux and another with Windows. It looks like it’s trying to automatically mount the Linux partitions. I have ‘Browse media when inserted’ unchecked.

Why would this be happening, and where can I disable it?

Thank you 😊

fonts.conf change:

If this is implemented, please remove the section in fonts.conf that changes 'sans-serif' to 'Liberation Sans'. That’s a personal setting only. I did not intend to include that part. Thanks! 😊

#2 - 04/17/2019 02:09 PM - ericbsd
- Target version changed from GhostBSD 19.04 to GhostBSD 19.09

#3 - 08/28/2019 05:49 PM - ericbsd
#4 - 04/03/2020 01:32 AM - willbproggin
This appears to be resolved in 20.03 and possibly earlier versions.

Thanks! :-)
