Relevant part:
```
Fatal trap 12: page fault while in kernel mode
cpuid = 1; apic id = 01
fault virtual address = 0x2020
fault code = supervisor read data, page not present

```

This happens repeatedly, so I'm unable to get started on this HP 6730b business laptop (which is somewhat outdated but I know that FreeBSD 12-alpha + ZFS runs on it).
